

Alkebuland Whitepaper

Project Name: ALKEBULAND

Symbol: AKLD

Blockchain: Binance Smart Chain BEP20.

WHITEPAPER 1.0

INTRODUCTION

ALKEBULAND (AKLD) is a unique fully decentralized peer-to-peer (P2P) digital utility token built on Binance Smart Chain (BSC). The project was funded in February 2022 by young talented African entrepreneurs with diverse knowledge in blockchain technology to change the narratives of how the world perceives Africa (motherland). The Alkebuland token (AKLD) will function as the native cryptocurrency at the center of all transactional activities within the ecosystem envisioned to serve the masses with a tremendously positive influence on the rising economies in Africa through its charity, agriculture, real estate and connect entrepreneurs with potential investors through the power of the crypto world. ALKD will be a community-driven token that will empower Africans and bridge the gap to the opportunities that blockchain technology offers.

MISSION

Our mission is to create a unique ecosystem through blockchain technology to connect Africans and the rest of the world irrespective of their race, religion, ethnicity, and culture. Across Africa, there are millions of unemployed youths who are ready to explore

the current trending technologies, and the Alkebuland project is designed to explore a series of challenges faced by Africans and provide solutions.

By creating Agro-sponsored investment, connection between entrepreneurs and potential investors, virtual and sponsored education, educational hubs, and many other exciting platforms, we aim to assist and stimulate entrepreneurs in every age category to enable them achieve their goal.

Ecosystem

Binance Smart Chain (BSC)

We chose to launch the Alkebuland token on Binance Smart Chain because it powers hundreds of projects ranging from DeFi, liquidity pools, DEX trading, or as a payment for NFT marketplaces. The BSC ecosystem is using Proof of Staked Authority (PoSA) consensus powered by validators and delegators.

Transaction Fees

BSC blockchain uses BNB as gas for transaction fees, which is cheaper compared to Ethereum gas fees. This allows investors to invest without worrying about incurring high fees.

AGRICULTURE “AGTECH”

How can blockchain help solve agriculture supply chain problems?

Blockchain technology can help solve most of these problems by creating an environment of trust between the producers and consumers. Also transparency can be significantly improved by providing specific product information on the blockchain. Blockchain also has serious consequences for both farmers and businesses.

While it allows companies to increase the quality of products and thus improve their competitiveness in the market, it also makes it very unlikely that companies selling low-quality or fraudulent goods will survive for very long if they persist in their sloppy practices.

From the consumer’s perspective, blockchain technology can be crucial in providing consumers with trustworthy and accurate information about the process of making their food. It is a great tool to address diverse consumer concerns regarding their meals’

safety, quality, and sustainability. Furthermore, since consumers understand the food production process, it grants them more freedom of interaction with the people who produce their food.

We will create a network of African/Caribbean organic farmers running on the blockchain. From there we will create our own supermarkets with organic food such as fruits and vegetables where the local people can work.

The most typical scenario currently being debated in agriculture is as follows:

- First, the farmer cuts the field.
- Every time they unload the grain, the information about the area where the grain was harvested is uploaded to the blockchain system via precision agricultural equipment.
- This process repeats each time the grain is transferred.
- Finally, the outcome is that the customer can access a reliable and complete ledger of the product from the field to the plate.

We will target Africa (Alkebuland) as a whole and be unique by having the capacity to produce foods and vegetables from all over Africa/Caribbean and make them available globally.

Franchising a supermarket will be an option. In this way, we hope to set up multiple stores in different countries across the continent and the Caribbean and provide employment opportunities.

Alkebuland Farming Team:

- Alkebuland will Partner with farmers and potential farmers to create an agricultural network that will promote productivity while enriching both farmers and investors with a fair system

TECH HUBS - ALKEBULAND ACADEMY

We also plan to launch a tech hub where young talent can acquire/develop skills to increase productivity in different fields.

Software Skills

- Communication tools

- Social media management
- Spreadsheets
- Word processing and desktop publishing tools
- Presentation tools
- Computer programming
- Databases
- Graphic design

Hardware Skills

- Hardware development, analysis, and testing
- Desktop management interface
- Cloud management
- Network configuration
- WAN/LAN
- Technical support and troubleshooting
- Network security

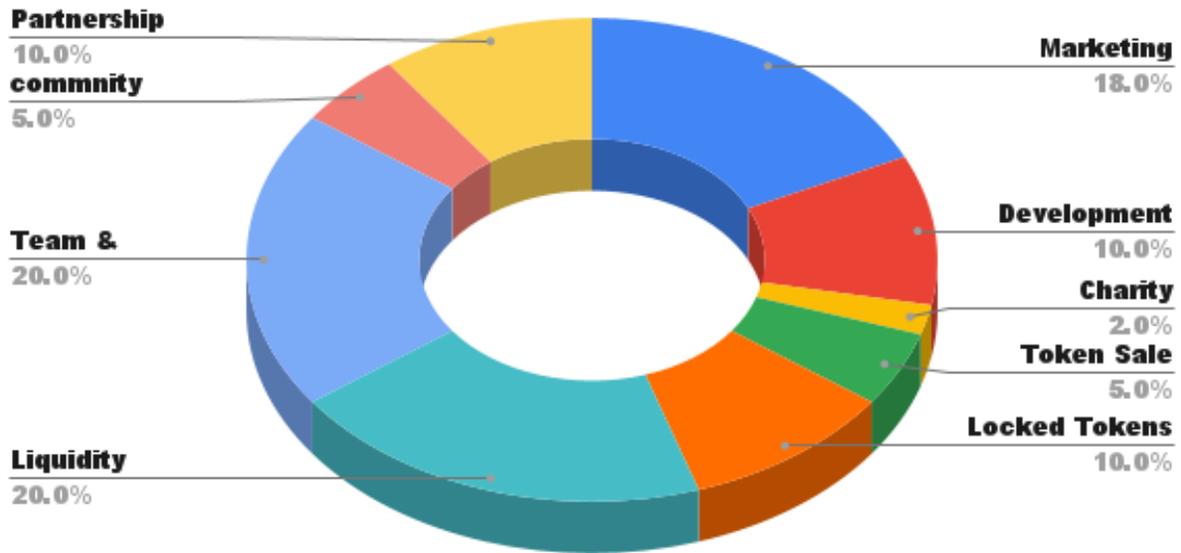

Tokenomics

The Alkebuland token is a BNB Chain token of the BEP-20 Standard.

- Token Name: **Alkebuland**
- Ticker: **AKLD**

Max Supply: 2.5 Billion

Token Allocation

	Tokens	Percent	Upfront Release	Unlock After	Amount Released
Marketing	450,000,000	18%	50%	3 months	10% monthly
Development	250,000,000	10%	50%	3 months	10% monthly
Charity	50,000,000	2%	0%	1 month	10% monthly
Token Sale	125,000,000	5%	NA	NA	NA
Locked Tokens	250,000,000	10%	0%	2months	20% monthly
Liquidity	500,000,000	20%	0%	6months	100% monthly
Team & Advisory	500,000,000	20%	6.25%	3months	6.25% quarterly
Community	125,000,000	5%	50%	6months	10% monthly
Partnership	250,000,000	10%	25%	3months	10% monthly

- Marketing: 18%
- Development: 10%
- Charity: 2%
- Token Sale: 5%
- Locked Tokens 20%

- **Liquidity: 20%**
- **Team: 10%**
- **Partnership: 10%**
- **Community 5%**

Note: Team, Charity, Development & Marketing are locked for the first 6 months and 5% quarterly unlock for 4 years.

Partners

We already secured a good working relationship with some mega organizations as our partners, and as we keep expanding and building, we're open for more partnerships that will make our ecosystem wider and stronger.

This will be focused on investing in simple products, products can be startups or businesses looking for funds to start or expand their companies, products or business.
